

Production downtime
Process weaknesses
Potential for optimization?

- Fluctuations in material flow
- Fluctuations in pressure
- Feed problems
- Dust
- Threads

→ We have the solution

1 Finding ideas

Training & Consulting

Our experts analyze your processes, uncover hidden potential, and work with you to define clear requirements—available for booking immediately, with no long lead time.

2 Putting ideas into practice

Concept & Validation

Based on your requirements, we develop concrete solutions—technically sound, strategically designed, and without disrupting your ongoing production.

3 Evaluating ideas

Trials in the test center

This is where everything is decided: We test your concept in our pilot plant on a pilot scale—in parallel with your ongoing production, with no investment risk, and using a comprehensive database.

Flawed assumptions are eliminated before they become costly. Successful tests provide the basis for a sound investment decision.

Trials pay for themselves immediately—preventing a single failed attempt in production more than offsets the cost of testing.

Your team focuses on production—our team provides the solution to your needs—the production downtime costs you avoid more than offset the testing costs

4 Using ideas

Implementation right at your location

We install proven solutions directly in your facility—with minimal production downtime and full operational reliability. You'll see the benefits from day one.

→ We support you

Fluctuations in material flow

Fluctuations in pressure

Feed problems

Dust

Threads

No production risk

All trials are conducted in the pilot plant—your production capacity remains fully intact

A Solid Investment Foundation

Empirical data replaces assumptions—decisions become transparent and robust

Future improvements are evident

A partnership based on mutual respect

Coperion is your trusted partner—from the initial concept through to ongoing operations

Coperion - Your strategic partner for sustainable process optimization
